

Letter Drafter EPC — Product Specification

InfraMind EPC | Product Concept Note | June 2026

Prepared by Samanta Nayak — Manager, Contracts & Claims | Infrastructure AI Architect

What It Is

Letter Drafter EPC is a proposed AI-assisted drafting tool for contractual letters, notices, and formal correspondence used on EPC projects. It is designed to help contracts teams prepare clearer, faster, and more consistent communications under FIDIC and similar contract environments.

The product concept comes from direct experience of how much time is lost in converting site events, contractual triggers, and internal inputs into professionally structured external correspondence. The goal is not to replace judgment. The goal is to improve drafting speed, clause discipline, and document consistency.

Why It Matters

On infrastructure projects, weak correspondence often creates avoidable risk. Letters are delayed, clauses are cited loosely, factual chronology is incomplete, and the final draft may not reflect the contractual purpose of the communication.

That creates practical consequences:

- Notice intent becomes unclear.
- Entitlement support becomes weaker.
- Internal teams spend time redrafting language instead of resolving the issue.
- The project record becomes harder to defend later.

Letter Drafter EPC is intended to reduce those problems by giving contracts teams a structured drafting workflow built around actual EPC correspondence patterns.

Proposed Use Cases

- FIDIC notices and contractual correspondence
- Engineer / Employer letters
- Variation-related letters
- Delay and disruption communications
- Reservation of rights letters
- Response letters to incoming contractual correspondence
- Internal draft preparation before legal or management review

Core Functional Intent

Capability	Purpose
Prompted draft assembly	Converts user inputs into a structured first draft
Clause-aware drafting	Helps align wording to the contractual purpose of the letter
Tone control	Supports formal, neutral, firm, or reservation-oriented drafting styles
Fact structuring	Organises chronology, references, and requested action clearly
Review-ready output	Produces a draft suitable for manager, legal, or project review

Positioning

This is not presented as a deployed commercial software product. It is a practitioner-designed product concept shaped by live contracts and claims work on EPC megaprojects.

Its value lies in three things:

- It is designed from the drafting realities of contracts teams.
- It is informed by FIDIC notice discipline and claims support needs.
- It focuses on usable first-draft quality rather than generic AI text generation.

Intended Workflow

1. User selects the correspondence purpose.
2. User enters key facts, dates, parties, and contract references.
3. The tool structures the draft around contractual intent and chronology.
4. The draft is reviewed internally and refined before issue.
5. Final approved correspondence is issued through the project's formal process.

This keeps responsibility with the project team while reducing drafting friction.

Who It Is For

- Contracts Managers
- Contract Administrators
- Claims Engineers
- Project Controls and Planning interfaces preparing supporting correspondence
- Project Directors reviewing sensitive contractual communications
- Legal teams supporting project correspondence review

Why It Is Different

Most generic drafting tools produce fluent text but do not understand why a contractual letter exists. On EPC projects, the difference between a routine update and a rights-preserving notice is significant.

Letter Drafter EPC is being designed around that distinction. The emphasis is on contractual function, structured facts, and review-ready language — not just polished wording.

Current Status

Status: Product concept / specification stage

No commercial deployment is being claimed at this stage. The concept reflects a practical product direction within the InfraMind EPC portfolio and is available for discussion, refinement, and future pilot development.

Fit Within InfraMind EPC

Letter Drafter EPC sits within a broader contract intelligence direction that includes notice discipline, event logging, claim structuring, and operational record quality. It is intended to support better contract administration by helping teams communicate earlier, more clearly, and with stronger documentary discipline.
