

Unifier Sync — One-Page Overview

InfraMind EPC | Operational Automation Concept | June 2026

What It Is

Unifier Sync is a workflow automation concept shaped by real correspondence extraction needs on EPC projects using Oracle Primavera Unifier. It is intended to reduce repetitive manual handling of correspondence records and improve archive quality.

Problem It Addresses

Contracts teams often spend excessive time downloading, renaming, and filing correspondence manually. That effort reduces the time available for actual contract review and claims support.

Intended Value

- Faster correspondence extraction
- Better archive consistency
- Reduced manual filing effort
- Improved readiness of supporting records

Positioning

This one-pager should be read as a productised expression of a workflow proven in project-specific use, particularly on MAHSR T-3. It should not be presented as a broadly deployed commercial software product unless separately evidenced.
