

Contracts & Claims Advisory — One-Page Flyer

InfraMind EPC | One-Page Overview | June 2026

What It Covers

A proposed advisory offering for EPC contracts, claims, notices, variations, record discipline, and dispute support — shaped by live project experience in FIDIC-governed environments.

The Problem

Many claims weaken before they are even drafted. Notices are late, records are inconsistent, variations are not structured properly, and contractual communications do not preserve position clearly enough.

Proposed Service Areas

Service Area	What It Supports
Contract Administration	Better obligation and correspondence discipline
Notices & Correspondence	Stronger deadline visibility and issue response
Variation Management	Better capture, pricing support, and entitlement protection
Claims Preparation	More structured claim assembly and submission support
Record Discipline	Stronger contemporaneous support for future claims
Dispute Avoidance	Earlier intervention before positions harden
Arbitration Support	Better preparation of records and submissions

Experience Base

This offering is informed by Samanta Nayak's direct project experience on MAHSR T-3 and OPGC MGR through contracts, claims, notice discipline, and arbitration-linked work. It should be read as a proposed advisory model, not as evidence of current external client engagements.
