

InfraMind EPC

1. Executive Summary

InfraMind EPC is a practitioner led advisory and operational intelligence platform serving EPC contractors, infrastructure owners, and project delivery organisations. It was founded from a practical recognition: contracts, claims, planning, delay analysis, and project data are typically managed in separate silos, even though commercial risk moves across them as a single chain.

The firm is built around the expertise of **Samanta Nayak**, a contracts and claims professional with 19 years of EPC infrastructure experience. His background includes FIDIC contract administration on a major high-speed rail programme, ICC arbitration involvement on a railway project, and the development of operational intelligence tools deployed in live project environments.

InfraMind EPC is not a generic consulting proposition. It is an advisory capability grounded in direct delivery experience, evidence-led contractual work, and the ability to connect field realities with structured systems thinking.

Key Point: InfraMind EPC sits at the intersection of contract administration, delay analysis, and operational intelligence — a combination that no single competitor currently occupies.

2. Differentiated Position

Most market offerings address only one part of the problem. Planning advisors focus on the schedule. Claims specialists focus on entitlement. Technology vendors focus on workflows. Legal support often enters after the record is already weak.

InfraMind EPC is differentiated by combining four capabilities in a single profile:

Dimension	InfraMind EPC Position
Project-side credibility	Live contracts and claims responsibility on major EPC assignments
Contractual depth	FIDIC administration, notices, EOT claims, variations, and dispute-facing record discipline
Analytical capability	Delay analysis, programme review, project-controls integration, and evidence structuring
Systems orientation	Applied AI and automation concepts shaped by real project workflow problems

The practical implication is straightforward: the same practitioner who understands how entitlement is preserved is also able to design the workflows and tools that improve how that discipline is executed.

2.1 Core Belief

The quality of a claim is determined by the quality of its evidence, not the sophistication of the analysis placed over weak records. Every InfraMind EPC engagement is structured around this principle.

3. Core Capabilities

3.1 Contracts and Claims Management

Full FIDIC contract administration from award to completion — notice management, Sub-Clause 20.1 compliance, variation identification, claims preparation, EOT strategy, counter-claim defence, and dispute board management. Every approach is grounded in live project responsibility under FIDIC-governed megaproject conditions.

3.2 Delay Analysis and EOT Preparation

Cause-and-effect delay analysis using recognised methodologies — Impacted As-Planned, Time Impact Analysis, Window Analysis, and As-Built vs As-Planned. Contemporaneous record compilation and EOT claim preparation built to international arbitration standards.

3.3 Project Controls and Planning

Primavera P6 baseline development, schedule variance analysis, critical path management, resource levelling, and progress reporting. Integrated with claims and contract administration workflows — because weak schedule discipline becomes a commercial and contractual problem.

3.4 Operational Intelligence and AI Enablement

Applied work in document intelligence, workflow automation, OCR-led record handling, NCR tracking, and contract-oriented AI tooling for EPC operations. These capabilities are presented with maturity discipline — distinguishing clearly between project-deployed tools, demonstrable assets, and concept-stage modules.

3.5 Dispute and Arbitration Support

Expert report preparation, factual witness statements, cross-examination preparation, and tribunal submission support for ICC, DIAC, SIAC, and LCIA proceedings. Includes direct experience as a Fact Witness in ICC arbitration.

4. Evidence Base

The evidence underlying InfraMind EPC's positioning comes from Samanta Nayak's direct project track record. This foundation is factual, specific, and defensible.

Capability	Evidence
Experience depth	19 years of EPC infrastructure experience; 10 years in contracts and claims roles at a leading Indian EPC contractor
Megaproject scale	Contracts and claims responsibility on a multi-thousand crore high-speed rail package under FIDIC Yellow Book with international oversight
Notice discipline	Full Sub-Clause 20.1 compliance maintained throughout tenure — no time-barred claims
Claims execution	Multiple EOT claims submitted, all supported by contemporaneous records
Dispute credibility	ICC Fact Witness role on a railway project arbitration
Operational tooling	Development of project-side digital tools for EPC records, dashboards, OCR, and contract-support workflows

Note: The above metrics reflect Samanta Nayak's direct project experience at a leading EPC contractor — not InfraMind EPC client engagements, which are yet to commence.

5. Selected Experience

5.1 High-Speed Rail Track Package

Attribute	Detail
Project type	High-speed rail — ballastless slab track section
Value	Multi-thousand crore
Contract	FIDIC Yellow Book with international oversight
Role	Manager – Contracts & Claims
Context	Contract administration, notices, EOT preparation, delay linkage, dispute readiness, and project-record discipline across a major linear infrastructure package

5.2 Railway Project — ICC Arbitration

Attribute	Detail
Project type	Railway project
Value	Multi-hundred crore
Role	Assistant Manager – Contracts; ICC Fact Witness
Context	Arbitration-linked contracts, claims, delay analysis, evidence preparation, and dispute support through the full arbitration lifecycle

5.3 AI Product Deployment

Attribute	Detail
Engagement	Operational deployment of Digital Twin and NCR Tracker on a live EPC megaproject
Context	Real-world AI tooling for contract administration and project operations

6. Engagement Models

The following engagement structures represent how InfraMind EPC advisory services are designed to operate. No client engagements are currently active — these are proposed models available for discussion.

Service	Target Audience	Proposed Format
Executive Review	Project directors, commercial leadership	Focused diagnostic — contract, claims, delay, or operational-risk assessment
Targeted Workstream Support	Contracts teams, project controls	Notice discipline, EOT preparation, records structuring, planning-to-claims alignment
AI Strategy for EPC Operations	EPC contractors seeking AI adoption	60–90 minute initial consultation
Digital Twin Architecture	Linear infrastructure contractors	90 minute scoping session
Contract Intelligence Design	Legal counsel, contracts managers	60 minutes (NDA-protected)
Expert Advisory	Legal counsel, expert witnesses	30–60 minutes (NDA-protected)
Planning, Scheduling & Programme Controls	EPC project controls teams	Scoped per project
Delay Analysis & EOT Claims Support	Contracts managers, legal counsel, project directors	Scoped per claim complexity

7. Credentials

Area	Credential
Professional tenure	19 years of EPC infrastructure experience
Contracts leadership	10 years in contracts and claims roles at a leading Indian EPC contractor
Arbitration	ICC Fact Witness on a railway project arbitration
AI capability	AI Generalist certification; AIG Community Champion 2025
Technical tools	Primavera P6, TILOS, Oracle Unifier
Domain training	SCL Delay and Disruption Protocol; FIDIC 1999 and 2017; ICC arbitration procedures
