Letter Drafter EPC

Contractually Precise Correspondence. Every Time.

Automated generation of FIDIC-compliant letters, notices, and correspondence, ensuring correct clause references, proper addressees, and contractually precise language for every communication.

Prepared by Samanta Nayak Contracts & Claims Management · Infrastructure AI Architect InfraMind EPC

1. PRODUCT DEFINITION & PROBLEM SOLVED

The Problem

Contractual correspondence on EPC megaprojects is a legal minefield. Every letter sent to the Employer or Engineer becomes part of the permanent project record.

Often, letters drafted by busy site engineers contain mistakes: incorrect clause citations, imprecise definitions of delay events, or an inappropriate tone that triggers adversarial reactions. A single slip, such as referring to a "change" instead of a "Variation" under Sub-Clause 13.1, or missing a mandatory notice period under Sub-Clause 20.1, can jeopardize millions in claims.

The Solution

Letter Drafter EPC automates the generation of contract correspondence. Using pre-approved, contractually verified templates mapped to specific FIDIC clauses, it ensures that every letter has correct references, uses precise contractual language, and adopts an objective, professional tone.

The software eliminates human drafting errors, accelerates the turnaround time of correspondence, and builds a defensible, consistent record for any dispute resolution or ICC arbitration panel.

4. EXAMPLE NOTICE GENERATED

InfraMind EPC

inframindepc.com

FIDIC Sub-Clause 20.1 Notice of Claim (Ground Conditions §4.12)

Below is an outline of the letter structure generated:

* **Header:** Contractor letterhead, serial reference number, date, and project name (e.g., MAHSR T-3). *

* **Addressee:** The Engineer (e.g., JICC Vadodara Office) with copies to the Employer (NHSRCL). **Subject Line:** CONTRACT NO. [NUMBER] - NOTICE OF CLAIM UNDER SUB-CLAUSE 20.1 IN RESPECT OF UNFORESEEABLE PHYSICAL CONDITIONS UNDER SUB-CLAUSE 4.12* * **Opening Paragraph:** Formal notice that a delay event

has occurred, complying with the 28-day notice window. * **Facts of Event:** Specific location (Km 415.2

Vadodara) and date of discovery of the hard rock strata. * **Contractual Reference:** Identifies why the rock

strata is "Unforeseeable" under the definition in Sub-Clause 1.1.6.8. * **Closing:** States that detailed particulars of the delay and cost impact will be submitted within 42 days under Sub-Clause 20.1.

5. USE CASE ILLUSTRATION

Scenario: Delayed Access to Site (§2.1)

* **Context:** The Employer (NHSRCL) failed to hand over the corridor from Km 425 to Km 428 by the scheduled contract date, delaying track bed construction. * **Compiler Action:** Contractor selects "Sub-Clause 2.1 Access Delay", inputs the scheduled vs. actual access dates and coordinates. * **Output:** Letter Drafter EPC generates a formal, legally tight Notice of Claim under Sub-Clause 20.1 in less than 2 minutes, detailing: - Exact coordinates of delayed access. - Core citation of Sub-Clause 2.1 (Right of Access to the Site) and Sub-Clause 8.4 (Extension of Time). - A professional request for the Engineer's determination.
