

Unifier Sync Case Study

InfraMind EPC Operational Deliverable Portfolio

UNIFIER SYNC — CASE STUDY

InfraMind EPC · Operational Automation Suite

Version: 2.0 **Date:** June 2026 **Product:** Unifier Sync — Automated Correspondence Extraction for Oracle Primavera Unifier

CASE STUDY: UNIFIER SYNC ON MAHSR T-3

From 3.5 hours to 15 minutes per batch. Zero missed correspondence. 100% structured archive for claims and arbitration.

Executive Summary

Dimension	Detail
Project	Mumbai–Ahmedabad High Speed Rail — T-3 Track Package (INR 3,142 Crore)
Problem	3–4 hours daily spent manually extracting contractual correspondence from Oracle Unifier
Solution	Automated bridge between Unifier and organised file storage, built by the contracts team
Result	85–90% time reduction. 100% completeness. Forensic-grade archive. Built in 3 days.

1. The Challenge

InfraMind EPC

inframindepc.com

The Daily Bottleneck

The contracts team on MAHSR T-3 processed 50+ correspondence records per day through Oracle Primavera Unifier. Each record required: login, navigation, opening, PDF download, manual renaming with the correct COR number, and filing in the right folder.

Metric	Value
-----	:-----:
Records per batch	50
Attachments per record	1-3
Time per batch	3-4 hours
Frequency	Daily
Annual hours consumed	200+ hours

Business Impact

Issue	Consequence
Missed correspondence	Incomplete claims evidence. Risk of losing entitlement.
Disorganised filing	No chronological archive. Cannot locate records under pressure.
Human error	Wrong COR numbers, misplaced files, lost attachments.
Delayed compilation	Risk of missing Sub-Clause 20.1 deadlines while assembling evidence.
Arbitration vulnerability	Cannot produce organised, timestamped evidence on demand.

This was not a productivity problem. It was a risk exposure problem. Every hour spent clicking and filing was an hour not spent on analysis. Every misfiled document was a potential gap in the claims record.

2. The Solution

InfraMind EPC

inframindepc.com

What Was Built

Unifier Sync is an automated bridge between Oracle Primavera Unifier and a structured, date-organised file archive. It replicates the manual workflow — login, navigate, download, rename, file — at machine speed with zero errors.

Capability	What It Does
Automated login and navigation	Connects to Unifier, accesses the correspondence module, iterates through all records
Bulk download	Downloads every PDF attachment from every record in a batch
Intelligent naming	Reads COR number and reference data from each record, names files automatically
Structured filing	Organises output into date/COR/reference folder hierarchy
Completeness verification	Confirms every record and attachment was captured

Key Design Decisions

- **Built by the practitioner** — designed by the contracts manager who performed the manual process. The tool automates exactly what the team needed, not what a vendor assumed they needed.
- **No API dependency** — works with Unifier's standard web interface. No integration cost. No vendor involvement.
- **Session-isolated** — each execution uses a clean session. No cross-contamination between batches.
- **Audit-ready output** — folder structure matches claims evidence hierarchy. Archives are immediately usable for arbitration preparation.

3. The Results

InfraMind EPC

inframindepc.com

Measured Performance

Metric	Before	After	Improvement
-----	:-----:	:-----:	:-----:
Time per batch	3–4 hours	15 minutes	85–90% reduction
Organisation	Manual filing (inconsistent)	Automated date/COR/ref hierarchy	100% consistent
Completeness	Human error risk	Systematic coverage	100% capture rate
Claims evidence compilation	2–3 days	Immediate access	95% faster
Arbitration readiness	Ad-hoc organisation	Structured, timestamped archive	Forensic-grade

Business Impact

Impact	Outcome
--------	---------

Time savings	200+ hours per year returned to contracts analysis
Risk reduction	Zero missed correspondence. Complete evidence chain maintained.
Claims readiness	Any record retrievable within seconds. No more 2-day evidence hunts.
Arbitration protection	Timestamped, organised archive meets ICC evidence standards.
Team productivity	Contracts team focused on analysis and compliance, not data entry.

4. How It Evolved

Unifier Sync reached its current capability in three days across four iterations. Each version addressed a specific operational need as it emerged from daily use.

Iteration	When	What It Added	InfraMind EPC — Why	Unifier Sync Case Study
-----------	------	---------------	---------------------	-------------------------

InfraMind EPC	V1	Day 1	Single-record manual download	Proved the automation concept on one record inframindepc.com
	V1-SmartClick	Day 1	50-record batch iteration	Scaled from one record to full batch
	V2-SmartSorting	Day 2	Automated folder organisation	Eliminated manual filing entirely
	V2.1-PropertiesScraper	Day 3	Automatic COR number extraction	Removed manual renaming step

The lesson: start with the smallest useful automation, prove it on real data, then extend based on actual usage patterns. The tool was not designed in a specification document. It was shaped by the records it processed.

5. Why This Matters

Practitioner-Built vs Vendor-Built

Criterion	Vendor Solution	Practitioner-Built
Development time	3–6 months (requirements, procurement, implementation)	3 days
Cost	INR 10–50 Lakhs (licensing, implementation, consulting)	Fraction of vendor cost
Integration dependency	API contracts, vendor support, change requests	Works with standard web interface
Adaptability	Change request cycle (weeks to months)	Modified in hours by the practitioner
Domain fit	Generic workflow automation	Built by the contracts manager who does the work

What This Proves

Unifier Sync demonstrates that AI and automation on EPC megaprojects do not require large budgets, vendor engagements, or multi-month implementation cycles. The most effective automation is built by the practitioner who understands the process, deployed on the actual platform, and iterated based on real usage.

6. See It in Action

Step	Action
------	--------

Request a demo	See Unifier Sync processing a live batch. Compare before/after timestamps.
Discuss your use case	30-minute exploratory call to identify automation opportunities on your project.
Start a pilot	Deploy a targeted automation on one business process. Measurable results in days, not months.
